Preparation of Proposal

Cover Letter

At the beginning of the proposal, provide a cover letter to include the description of your company history, and the manufacturer's facility and scope of operations.

Delivery Terms

The manufacturer should provide a user information guide for the garments, which complies with user information requirements of NFPA 1971. Topics should include, but not necessarily be limited to pre-use information, preparation for use, inspection frequency and details, done/doff, use consistent with NFPA 1500 and NFPA 1851; 2014 edition, maintenance and cleaning, and retirement and disposal criteria and considerations. This document should be packaged with each garment along with a specification summary sheet describing garment custom options, sizing, and production details.

References

Proposers should include list of references as part of their proposal submission. Proposers are required to demonstrate successful performance of the proposed turnout gear and customer service level by submitting references from three (3) user departments during the past three (3) years. The proposer should provide references from using departments of similar size, climates, with comparable number of employees, similar call type and volume.

Name and contact numbers must be for a liaison within the respected Fire Department who has an intimate working knowledge of the performance and wear/tear of the proposed turnout gear.

Understanding and Adherence to Specifications

Include a section in the proposal that demonstrates your understanding of the basic scope of services and performance requirements stated in the RFP. Included in this section is information on service and FOB delivery terms.

Gear Specifications

Submit a comprehensive and detailed description of the proposed product. Include manufacturing materials, procedures, testing, specifications, diagram, drawing and/or photos. Describe your company's process for fitting and sizing throughout the contract period. Any exception or variation in construction, materials, performance, testing, or items of equipment between this specification and the proposal shall be detailed and submitted on a separate sheet(s) along with the proposal in sequence, citing page and item number. Proposers must explain in detail and with full supporting data how the proposed deviation meets or exceeds the specifications.

1. Gear Miscellaneous
 - a. Coat and trouser shall be manufactured by the same company to insure uniformity, complete protection and compatibility. No exceptions.
 - b. Include the available size increments for both men and women and detail the percentage of gradation for the proposed product.
 - c. This request for proposal defines the minimum requirements for blood borne pathogen resistance (BPR) firefighter personal protective equipment (PPE) to provide limited protection to fire fighters against adverse environmental effects during structural firefighting operations and certain other emergency operations where there is a threat of fire or where certain physical hazards are likely to be encountered, such as during non-fire-related rescue operations, emergency medical operations, and victim extraction, as defined by NFPA 1971, Standard on Protective Ensemble for Structural Fire Fighting, 2018 Edition (hereinafter referred to as NFPA 1971, except in the Applicable Documents section). In the absence of comment on a particular point, industry standard practice should be presumed to prevail. Workmanship and material should be

first quality throughout. Proposer must provide documentation for minimum THL and TPP in Coat and Pants and min. CCHR in knees and shoulders. In the absence of comment to a specific point, the proposer is required to furnish a wholly compliant garment.

- d. The protective gear as a set (coat and pants) shall meet the Standard on Protective Ensemble for Structural Fire Fighting, 2018 Edition. Supplier should include in their response the THL and TPP overall composite of the proposed gear.
- e. Protective gear shall meet NFPA 1971 2018 ed. Cleaning Shrinkage Resistance Test. Supplier should include in their response the Cleaning Shrinkage Resistance Test results.
- f. Current NFPA standards applicable to this product specification express values for measurement requirements in SI (metric-based) units, followed by US (inch-pound) approximate equivalents in parentheses. For the convenience of the fire department, this product specification reverses the order and presents the more familiar US approximation first, followed by the SI requirements in parentheses.
- g. Labels shall be permanently and integrally printed onto materials that meet all the requirements for labels of NFPA 1971. The garment shall be clearly labeled to fully identify the material content of all three layers: outer shell, moisture barrier and thermal liner.
- h. Labels on each separable part of the garment should include a standard style interleaved 2 of 5 barcode containing (at a minimum) an individualized serial number for asset tracking purposes.
- i. The manufacturer should furnish, free of charge, reasonable quantities of NFPA 1971-certified thread, materials and other supplies to allow the department to manage its own ongoing internal maintenance efforts. Also, the manufacturer should provide on call at no charge, during normal business hours, a liaison for the repair department to assist the Fire Department on a telephone consultation basis, on all manufacturer's plant, rather than in department, over the life of the contract. All thread used in structural seams should be Nomex® or equivalent of minimum Tex size T-70. Thread should match the fabric as close as possible.

- j. Reinforcements made of Black Poly-Coated Aramid or equivalent shall be provided at cuffs, knees and pockets and should meet the requirements of NFPA 1971.
 - i. For cuff reinforcements only: Manufacturer must provide cuff reinforcements made of Black Poly-Coated Aramid or equivalent material at no additional cost. If the purchaser specifies reinforcements made of materials other than outer shell material, the manufacturer should identify any additional cost for the specified materials.
 - ii. For pocket reinforcements only: Black outer shell coat liner or equivalent must be used in the reinforcement of the pocket.
 - iii. For knee reinforcements only: Black Poly-Coated Aramid or equivalent material must be used to reinforce knee area of pants.

- k. Excluding where required by NFPA standard, necessary for functionality, or specifically called out in the custom option sections, all materials used in the construction of the garments should be breathable and all moisture barrier material must be as specified in the following materials section. The breathability requirements include but is not limited to: collar, chinstrap, storm shield, fly, water wells, front coat facing and reinforcement cushioning where applicable.

Areas where non-breathability is allowed (absent Custom Features specifications): trim, hook and loop fastening, hardware or hardware backing, and external pocketing.

If you do not have a number, see *How to get a TIN* on page 3.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. The IRS has created a page on IRS.gov for information about Form W-9, at www.irs.gov/w9. Information about any future developments affecting Form W-9 (such as legislation enacted after we release it) will be posted on that page.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, payments made to you in settlement of payment card and third party network transactions, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the

withholding tax on foreign partners' share of effectively connected income, and

4. Certify that FATCA code(s) entered on this form (if any) indicating that you are exempt from the FATCA reporting, is correct.

Note. If you are a U.S. person and a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax under section 1446 on any foreign partners' share of effectively connected taxable income from such business. Further, in certain cases where a Form W-9 has not been received, the rules under section 1446 require a partnership to presume that a partner is a foreign person, and pay the section 1446 withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid section 1446 withholding on your share of partnership income.
